

The wet abrasive blasting systems by the inventor which defines the world's standard.

Facade cleaning

## torbo<sup>®</sup> Facade cleaning

- Cleaning bricks and joints in one operation
- Cleaning of clinker facades without damage to joints or masonry
- Removes even stubborn contamination on various surfaces
- Removal of exhaust fumes and graffiti
- Cleaning of sensitive surfaces (e. g. sandstone facades) is also possible
- Removal also of multi-layered paint

## torbo<sup>®</sup> Benefits

- Low abrasive media consumption and low set-up times (saves time and money)
- Usually no or only small enclosure necessary
- Surface performance up to 1615 sq ft/day
- Perfect adjustment thanks to adjustable pressure
- Low wear of blasting nozzle and hose (long service life)
- Environmentally friendly and economical
- No ingress of water into the masonry

Due to environmental influences (exhaust fumes, dust, rain) and human interventions (graffitis, impregnation, plaster), facades of houses quickly got an unclean surface. A fast and inexpensive way to get the house walls clean are the wet abrasive sandblasting systems from torbo. Due to individual adjustment possibilities, not only an extremely low consumption of water and blasting media is achieved, but also brick and joints are freed from the dirt without causing any damage. Thus, even the most sensitive substrates of stubborn dirt or paint layers can be cleaned easily.
