

torbo®

Simply the most efficient.

The wet abrasive blasting systems by the inventor which defines the world's standard.

Graffiti-Removal

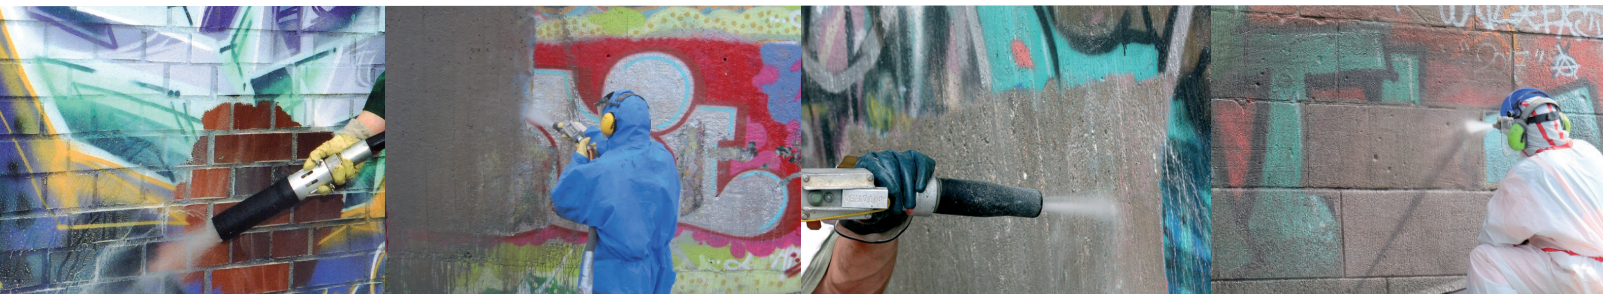

torbo[®] Graffiti-Removal

- Removal of various paint smears (graffiti)
- Removal of even stubborn dirt and other deposits
- No impacts or other damage to the substrate
- No penetration of water (e. g. into masonry) - no late effects
- Multilayer coatings are no problem

torbo[®] Benefits

- Perfect adjustment thanks to adjustable pressure and replaceable nozzle
- Spot blasting is also possible
- Usually no or only small enclosure necessary
- Economical abrasive consumption
- Very high area performance (up to 1615 sq ft/day)
- With the TS 98 vortex attachment, even the most sensitive substrates can be blasted.
- No chemicals needed

While the paint scrawls for some people belong to the cityscape, they are a nuisance for others. The damage caused by graffiti to buildings and public transport in Germany is estimated at 250 to 500 million euros every year. Up to now, however, the removal of graffiti has not only cost money, but also effort and time. The situation is different with the torbo wet abrasive blasting systems. The device can be easily adapted to the surface and in a few moments the graffiti has completely disappeared from the wall. And you will find no impacts or other damages to the substrate.
