

torbo®

Simply the most efficient.

The wet abrasive blasting systems by the inventor which defines the world's standard.

Preservation of monuments

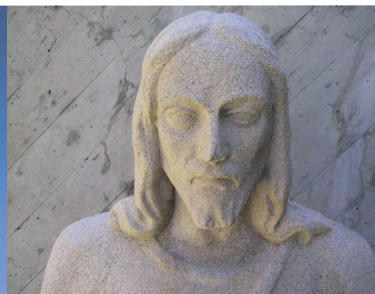

torbo[®] Monument preservation

- Cleaning of weathered monuments
- Removing graffiti and marks on highly sensitive surfaces
- Eliminate also stubborn dirt and other deposits
- Preservation of the historic patina
- Cleaning of natural stone (marble etc.) possible
- No gaps or other damage to the surface

torbo[®] Benefits

- Perfect alignment thanks to adjustable pressure
- Low working pressures even under 14 psi adjustable
- Even the finest blasting media can be used
- Economical consumption of blasting media from 39 lbs/h to 132 lbs/h
- Very high coverage (especially in connection with the rotation nozzle TS 98)
- Usually no or only small enclosures necessary

Historical buildings and art, sculptures and monuments are exposed to numerous burdens in the public space, which endanger their continuance. Apart from deliberate damage, it's the impurities from the air, which destroy the irretrievable cultural objects. For this reason, the use of torbo wet abrasive blasting systems are becoming more and more common. They remove even the hardest dirt without damaging the sensitive surface of the memorial. With the special rotation nozzle TS 98, an even higher surface coverage is achieved and at the same time a clean, even blasting result is generated.
